

By Our Own Efforts and Techniques

One day in October 2015 the respected Comrade **Kim Jong Un** visited the Kim Jong Thae Electric Locomotive Complex to see a tube train newly made by the establishment.

Learning in detail about the vehicle's form, colour, technical specifications and the quality of its fittings, he said that the train looked really nice and that its form and colour were well selected to meet the features of the means of public transport and modern aesthetic tastes.

He continued that the complex manufactured and installed advanced motors, brakes and controlling facilities to make driving easy and made well-designed fittings and service information indicators good for customer care, adding that if the train service began, the people would like it so much.

After getting on the train and seating himself, he said that the manufacture of the train by our workers, scientists and technicians was a remarkable success and it was more valuable as it was manufactured by our own efforts and techniques.

Identifying the secret of the manufacture of the Korean-style modern tube train as the painstaking efforts made by the scientists, technicians and workers on the basis of the belief in their own creative wisdom and strength, he said the current success proved once again that something can be created from nothing when we rely on the brains of our scientists and technicians and enlist the inexhaustible strength and the revolutionary spirit of self-reliance of the workers.
